

Armando Vasquez

armandovasquez0770@gmail.com

SUMMARY

Data Science student at UC San Diego with experience in Python, pandas, machine learning, and data visualizations. Skilled at analyzing complex datasets, building predictive models and communicating insights through clear reports. Passionate about using available data to solve real-world problems that can leave a positive impact behind.

EDUCATION

University of California, San Diego

June 2028

Bachelor of Science in Data Science, Machine Learning

SKILLS

Technical:

- Programming Languages: Python, Java, SQL
- Data Science Libraries: Pandas, NumPy, scikit-learn, XGBoost
- Data Analysis: Data Cleaning, EDA, Feature Engineering, Machine Learning
- Data Visualization: Power BI, Matplotlib, Excel
- Tools: Git, Github, Jupyter Notebook, VS Code

Professional:

- Problem solving
- Communication
- Team Work
- Customer Service
- Spanish Proficiency

EXPERIENCE

In Home Supportive Services

December/2024 – Present

Care taker

San Diego, CA

- Coordinated daily schedules, appointments, and household tasks to take consistent care of organization patients.
- Monitored health routines and wellness while maintaining communication
- Managed multiple responsibilities in a home environment, showing skill
- Communicated with health providers/family member to ensure care
- Resolve challenges and adapt quickly to changing situations in a safe environment.
-

RELEVANT PROJECTS

California Wildfire Risk Forecasting & Prediction System

Jan 2026 – Present

- Developing a county-level machine learning system to predict weekly wildfire occurrences across California by integrating CAL FIRE Wildfire records with CIMIS weather data.
- Engineered temporal and environmental features by using Pandas, including temperature, humidity, wind speed, precipitation, seasonal patterns, and historical wildfire activity.
- Compared Logistic Regression, Random Forest and XGBoosts models using time-based train/test splits and TimeSeriesSplits to evaluate performance under realistic forecasting conditions.
- Evaluated model performance by using precision, recall F1-score, ROC-AUC and PR-AUC, addressing class imbalances and prioritizing detection of wildfires.
- Used GeoPandas and Plotly to develop geographic visualizations of county level wildfire risk and identity patterns in wildfire activity.
